Getting started

What is a SIM card?

Each mobile phone requires a SIM card (subscriber identity module). Without the SIM card you can not make phone calls. The SIM card is a microprocessor which stores their data and contacts. Deal with a map so carefully, and take caution when inserting or removing the card. Keep SIM cards out of the reach of small children.

Insert the SIM card and micro SD card

1. The phone must be switched off and unplugged from charger.
2. Remove the battery cover on the back of the phone.

3. If the battery is in the device, please remove it.
4. See 2 cards holders: top left for the SIM card and the bottom right for the micro SD card.
5. Push the SIM card carefully into the SIM card slot (1). Ensure that the Gold contacts of the card facing down and beveled corner is.
6. Carefully slide the micro SD card into the SD micro SD card holder (2) and then lock them.

Insert the battery

1. Align the golden contacts of the battery with corresponding contacts of the phone.
2. Press on the other end of the battery until it locks in place.
3. Slide the battery door so far on the unit up until it clicks into place.

Charging the battery

There are two ways to charge the battery of the SC330:

A. Charging station

B. Charger

1. Insert the connector of the charger in the phone.
2. Connect the charger to the main socket.
3. Charging the battery can take several hours. If the phone's battery ran out, it may take awhile until the charge indicator appears on the display.
4. If the phone is turned on, charge indicator will appear on the display. The indicator will no longer flash when battery is fully charged.
5. Disconnect the charger from the socket and from the device if charging is not required

Note: The initial charge for the battery should be at least 12 hours.

Turn on or off the phone

Make sure that the SIM card is in the phone and the battery is charge.

1. Press **red button** 2-3 seconds to switch the phone on.
2. The PIN-code is active if the phone asks you the PIN code, please enter it and confirm with **OK**.
3. Please select your language and confirm with **OK**.
4. Press **rote Taste** 2-3 seconds to turn off the phone.

You can only call emergency number without a valid SIM card.

Note: If the PIN code entered incorrectly 3 times, the phone will ask you the PUK code that you have received it together with the SIM card.

Standby

If the phone is not used for a short period of time, the telephone will switch to standby mode automatically. Press any key to exit this mode.

SOS

The SOS function is a simple feature that can save lives in the decisive moment. You can store a total of 5 SOS contacts and SMS. You must save these contacts

first, in case of an emergency when you press the emergency call key on the back of the phone, these numbers will be called in sequence. During the emergency call a warning signal will be issued, so the person knows that it is an emergency and it sends an emergency SMS to all stored numbers! If the first number is not reached, the next number is dialed automatically, etc.

If no emergency number is stored or your phone card is empty or you are in a foreign network (E.g. roaming not enabled), you can still choose 911 or other emergency numbers with the digit keys.

Will be accepted the SOS call switches the hands-free telephone.

Note:

- Want to stop the alarm, must press the right menu button or the SOS button.
- When using a pre-paid SIM card: Make sure you always have sufficient credit on your pre-paid SIM card as private emergency numbers without sufficient balances are not elected.
- Usually the international emergency call 911 can still be called outside of

the network provider's home network.

Note: If you want to store emergency numbers such as rescue, police, fire service etc. as emergency number, you would need to check before this with the respective institution. Assumes no liability for any costs incurred, if you mistakenly call.

SOS

1. Choose *Menu, settings* and press *OK*
2. Choose *SOS* and press *OK*

SOS Alarm

You can turn the *SOS alarm* on and off

Specification

Quad-Band network:	WCDMA 850/1900Mhz GSM 850/900/1800/1900Mhz
Battery	Li-ion 800mAh
Size:	101 x 50.5 x 19.5 mm
Standby time:	<250 hours*
Talk time:	<480 minutes*

* The battery life depends on SIM card, network, applied settings, use and the environment.

Troubleshooting

If problems or irregularities occur during the use of the phone, read the information in the following table. If a particular problem cannot be solved by the following information, please contact the customer service via email: Jethro@jethroshop.com

Phone will not turn on:

- Check whether the battery is correctly in the phone.
- Check the battery status, charge 24 h long the battery or swap it if necessary from (6 months warranty).
- Check that the PIN code has been entered correctly.
- If the PIN-code 3 x false the SIM card is blocked and you need the PUK code (please contact your network operator for your PUK code).

SIM card error:

- Dirt on the contact areas of the SIM card? Clean the contact areas of the

SIM card. *Do not use water.

- SIM card is not properly inserted. Insert the SIM card properly.
- SIM card does not work or is damaged? Let your network operator replace the SIM card.

Network connection cannot be established:

- Poor reception? Embark on an open place or, if you are in an enclosed space, near the window.
- You are out of range of the cellular network. For information about the network coverage, Please contact your network operator.
- SIM card is not valid. Contact your network provider.

Bad voice quality:

- Bad network connection quality on the part of the operator? Press the stop button and select again. You will possibly need to switch to a network connection or phone line with better quality.
- Poor quality of local telephone line? Press the stop button and select again. You will possibly a network

connection or phone line with better quality.

- Try to turn volume louder.

Outgoing calls cannot be done:

- Check the phone number and try again.
- Have you activated the function call barring? If yes please disable all.
- Check whether the SIM card in the network is registered.
- Check that is enough credit on your SIM card.

You cannot receive incoming calls:

- Check whether the SIM card in the network is registered.
- Check if the phone is turned on.
- Check the signal strength
- Have you activated the function call barring? If yes please disable all.

Send SMS not working

- Please check the SMSC number (communication Central) under the following menu item:
"Messages - settings - SMS settings - SIM - SMSC - address": here the communication Central number of your carrier should be.

Display is black or white:

- Check the battery status, charge the battery or replace it.
- Check the background image.
- Did the phone get wet?

Locked:

- Check that if the PIN code has been entered correctly. If the PIN code has been entered incorrectly 3 times, the SIM card will be blocked and you will need the PUK code to unlock it: (please contact your network operator for your PUK code).

Tip: If particular problems could not be solved by the information, please visit our Web site www.jethroshop.comn and choose the product page of your phone and read the FAQ (frequently asked questions) or contact customer service.

Note: Please do not try to repair the phone yourself.

Battery

- Your phone is powered by a rechargeable battery.
- Note that a new battery only reaches its full capacity, after two or three times complete charge cycles! The battery can be charged several hundred times until eventually discharged. When the operating time (talk and standby time) compared to the normal operating time is much shorter, you should buy a new battery. Unplug the charger from the mains and from the device if it is not required. If the battery is completely discharged, it may take a few minutes until the charge indicator in the display appears, or you can make calls.
- Use only batteries and Chargers approved by the phone manufacturer. If you do not use the charger, pull the mains plug out of the socket. Leave the battery no longer than a week in the charger, since an excessive charge may shorten its

lifetime.

- A fully charged battery with the time discharge itself when not in use.
- Extreme temperatures have a negative influence on the performance of your battery.
- Use the battery only for its intended purpose. Never use damaged Chargers or batteries.
- Do not short-circuit the battery. An accidental short-circuit can occur by a metallic object of the plus and minus pole of the battery is connected directly together. Short-circuiting the terminals may damage the battery or the connecting object.
- Throwing batteries in a fire will cause danger of explosion! Batteries may also explode if they are damaged. Dead batteries must be disposed properly.
- Do not attempt to open the batteries or to destroy. Liquid leaking from a battery, you make sure the battery fluid does not contact your skin or in the eyes. If there was a contact, clean the skin or eyes immediately with water, or consult a doctor
- Dispose of batteries according to the

regulatory requirements (E.g. with regard to recycling). Never dispose of batteries in the household waste.

- Keep temperatures between 15 ° C and 25 ° C. The phone with a cold or warm battery not may work temporarily, even when the battery is fully charged. The performance is varying especially at temperatures below the freezing point.

Phone

If you follow the suggestions below, you can prevent any warranty obligations, and you can enjoy your product for many years.

- Please use only original accessories or accessories that are approved by the mobile phone manufacturer. The use of accessories without permission can lead to poor performance, damage the phone or harm even your body and interfere with appropriate local telecommunications equipment.

- Please switch off your mobile phone before you clean it. Use for this purpose damp or antistatic cloth, no chemicals or cleaning lotions, which can damage the phone.
- Because the mobile phone capable of generating electromagnetic fields, you should put never found near magnetic objects, such as a computer or a hard disk.
- Interference is generated using the mobile phone in the vicinity of certain electronic devices such as TV, telephone, radio and computer.
- Never leave your mobile phone in the Sun or in an environment with strong radiation because high temperatures considerably shorten the life of electronic components.
- Keep the phone dry, because liquids may damage the circuit.
- Never somewhere about the phone with strong force and do not drop it. Violent actions of this sort can damage the circuit.
- Please close any incompatible devices on the phone.
- Do not attempt disassemble the phone or its battery.

- Keep the mobile phone with a flammable or explosive material.
- Never try to charge the phone, without previously having inserted the battery.
- Do not paint your phone. By the color, moving parts may stick and prevent the proper operation.
- To disconnect the unit from the mains, pull the power cord from the mains socket. Therefore, you must position the device so that an unhindered access to the mains socket is always ensured; so that you can immediately remove the mains plug in an emergency situation. To prevent fire hazard, disconnect always unplug after each use of the device from the AC outlet.

In the same way, all instructions apply to phone, battery, charger, and all accessories. If any of these items not working properly, take it to your dealer. The staff will assist you and repair or replace the unit if necessary.

Safety instructions

Read these simple guidelines. Failure to follow of these rules can have dangerous consequences or violate regulations.

Do Not switch on the phone when the use of the mobile phones is forbidden.

It may come to errors or could cause hazard.

Traffic safety

Never use the phone in your hand while driving

Switch off in aircraft

Mobile phones can cause interference in aircraft.

Switch off in hospitals

Follow all rules and regulations. Switch off the phone near medical equipment.

Turn off at gas stations

In the vicinity of petrol stations and other places with explosive goods, the mobile phone is switch off.

Interference

Wireless phone can cause errors, which could affect performance.

Road safety:

Never use a phone in your hand while driving a vehicle. Always secure the phone in its holder; place the phone on the passenger seat or in a place where it can break loose in a collision or sudden stop. Remember: road safety always has priority!

Operating environment:

Don't forget to observe the special regulations in an area, and always turn off the phone when the use of mobile phones is prohibited

Or if the phone causes interference or dangerous situations can arise.

Always keep the unit in its normal operating positions.

Parts of the phone are magnetic. Metal parts may be attracted to the phone, and persons with hearing aid should not hold the phone to the ear with the hearing aid. Always secure the phone in its holder as metal parts may be attracted to the listener. Bring no credit cards or other magnetic data carriers in the vicinity of the phone because it contained data this can be deleted.

Electronic devices:

The most modern electronic equipment is shielded from RF (radio frequency) signals. However, it can happen that certain electronic devices against the RF signals from your mobile phone are shielded.

Hearing aids:

Some digital mobile phones can cause errors with some hearing aids. If such problems you can contact the service provider.

Other medical devices:

Operation of radio transmitting equipment, including cellular phones, can interfere with the function of inadequately

shielded medical devices under certain circumstances. If you need information about the sufficient shielded against external RF energy or have any questions, consult a physician or the manufacturer of the medical device. Switch off your phone in health care facilities when you are prompted by signs, posters or other written arrangements. Hospitals or health care facilities, devices be used under circumstances that could be sensitive to external RF energy.

Labelled sites:

Labeled sites:

Turn off wherever your telephone, where appropriate requests are suspended.

Hazardous locations:

Switch off your phone in hazardous locations, and act according to the directions and instructions. In such places, a spark can trigger an explosion or cause a fire, where you can get hurt or come even to death. We recommend the users turn off the phone at service stations. Users are reminded the need to observe restrictions on the use of radio equipment in fuel depots (storage and distribution

areas), chemical plants or where blasting. Places where explosion hazard exists are often but not always clearly marked. This includes, for example, the below deck on ships; Environments of pipes and tanks in which chemicals are; Vehicles that are powered by liquefied petroleum gas (such as propane or butane);

Places where chemicals or particles, such as grain, dust or metal powders, are located in the air; as well as any other place, where usually are advised to turn off your vehicle engine.

Vehicles:

RF signals may affect improperly installed or inadequately shielded electronic systems in motor vehicles (E.g. electronic fuel injection systems, electronic ABS systems (anti-lock-systems), electronic speed control systems, air bag systems) affect.

For your vehicle information, please contact your vehicle manufacturer or its representative. You should also ask for the manufacturers of devices that were subsequently fitted in your vehicle.

Information

Information about the IC Caution.

This device complies with Industry Canada licence-exempt RSS standard(s). Operation is subject to the following two conditions: (1) This device may not cause interference, and (2) This device must accept any interference, including interference that may cause undesired operation of the device.

Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence.

L'exploitation est autorisée aux deux conditions suivantes:

- (1) l'appareil ne doit pas produire de brouillage, et
- (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.

certification (FCC):

This device complies with part 15 of the FCC Rules. Operation is subject to the condition that this device does not cause harmful interference.

Any Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the

user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.

- Increase the separation between the equipment and receiver.

- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

- Consult the dealer or an experienced radio/TV technician for help.

Body-worn Operation

This device was tested for typical body-worn operations. To comply with RF exposure requirements, a minimum separation distance of 1.5cm must be maintained between the user's body and the handset, including the antenna.

Third-party belt-clips, holsters, and similar accessories used by this device should not contain any metallic components. Body-worn accessories that do not meet these requirements may not comply with RF exposure requirements and should be avoided. Use only the supplied or an approved antenna.

Limitation of liability:

- JETHRO declines all responsibility for injury-related, indirect, special, resulting from an accident or unavoidable, as the predictable viewed or not viewed can be.
- We reject all responsibility and liability for losses caused by natural disasters (such as earthquake, flood, etc.) or other incident or accident (including deliberate or accidental misuse by the manufacturer in the framework of these accidents or other unusual circumstances) that lie outside of our liability.
